A Pragmatic View of Jean Watson’s Caring Theory

Chantal Cara, Ph.D., RN
Université de Montréal
Faculty of Nursing

Goals
Provide an overview of Dr. Jean Watson’s caring theory to the nursing community.
Facilitate the understanding of her work allowing nurses to readily apply this knowledge within their practice.

Objectives
Describe the general aspects of Watson’s caring theory.
Describe how Watson’s caring theory can be applied to clinical practice.
Describe the person through Watson’s caring lens.
Describe the person’s health through Watson’s caring lens.
Describe nursing through Watson’s caring lens.

Key Words: Watson’s caring theory, clinical caritas processes, transpersonal caring relationships, caring occasion, clinical application of Watson’s theory

Abstract
As most health care systems around the world are undergoing major administrative restructuring, we expose ourselves to the risk of dehumanizing patient care. If we are to consider caring as the core of nursing, nurses will have to make a conscious effort to preserve human caring within their clinical, administrative, educational, and/or research practice. Caring must not be allowed to simply wither away from our heritage.

To help preserve this heritage, caring theories such as those from Jean Watson, Madeleine Leininger, Simone Roach, and Anne Boykin are vital. Through this continuing education paper we will learn the essential elements of Watson’s caring theory and explore an example of a clinical application of her work.
Introduction

The changes in the health care delivery systems around the world have intensified nurses’ responsibilities and workloads. Nurses must now deal with patients’ increased acuity and complexity in regard to their health care situation. Despite such hardships, nurses must find ways to preserve their caring practice and Jean Watson’s caring theory can be seen as indispensable to this goal. Through this pragmatic continuing education paper, we will explore the essential elements of Watson’s caring theory and, in a clinical application, illustrate how it can be applied in a practice setting.

Being informed by Watson’s caring theory allows us to return to our deep professional roots and values; it represents the archetype of an ideal nurse. Caring endorses our professional identity within a context where humanistic values are constantly questioned and challenged (Duquette & Cara, 2000). Upholding these caring values in our daily practice helps transcend the nurse from a state where nursing is perceived as “just a job,” to that of a gratifying profession. Upholding Watson’s caring theory not only allows the nurse to practice the art of caring, to provide compassion to ease patients’ and families’ suffering, and to promote their healing and dignity but it can also contribute to expand the nurse’s own actualization. In fact, Watson is one of the few nursing theorists who consider not only the cared-for but also the caregiver. Promoting and applying these caring values in our practice is not only essential to our own health, as nurses, but its significance is also fundamentally tributary to finding meaning in our work.

Overview of Watson’s Caring Theory

First, we begin with an introduction of Dr. Jean Watson. Dr. Watson is an American nursing scholar born in West Virginia and now living in Boulder, Colorado since 1962. From the University of Colorado, she earned her undergraduate degree in nursing and psychology, her master’s degree in psychiatric-mental health nursing, and continued to earn her Ph.D. in educational psychology and counseling. She is currently a Distinguished Professor of Nursing and the Murchinson-Scoville Chair in Caring Science at the University of Colorado, School of Nursing and is the founder of the Center for Human Caring in Colorado. Dr. Watson is a Fellow in the American Academy of Nursing and has received several national and international honors, and honorary doctoral degrees. She has published numerous works describing her philosophy and theory of human caring, which are studied by nurses in various parts of the world. The following is a summary of the fundamentals of the caring theory.

According to Watson (2001), the major elements of her theory are (a) the carative factors, (b) the transpersonal caring relationship, and (c) the caring occasion/caring moment. These elements are
described below, and will be exemplified in the clinical application that follows. Additionally, the reader may consult Table 1 and Table 2 for the theoretical values and assumptions.

Carative Factors

Developed in 1979, and revised in 1985 and 1988b, Watson views the “carative factors” as a guide for the core of nursing. She uses the term carative to contrast with conventional medicine’s curative factors. Her carative factors attempt to “honor the human dimensions of nursing’s work and the inner life world and subjective experiences of the people we serve” (Watson, 1997b, p. 50). In all, the carative factors are comprised of 10 elements:

Humanistic-altruistic system of value.

Faith-Hope.

Sensitivity to self and others.

Helping-trusting, human care relationship.

Expressing positive and negative feelings.

Creative problem-solving caring process.

Transpersonal teaching-learning.

Supportive, protective, and/or corrective mental, physical, societal, and spiritual environment.

Human needs assistance.

Existential-phenomenological-spiritual forces. (Watson, 1988b, p. 75)

As she continued to evolve her theory, Watson introduced the concept of clinical caritas processes, which have now replaced her carative factors. The reader will be able to observe a greater spiritual dimension in these new processes. Watson (2001) explained that the word “caritas” originates from the Greek vocabulary, meaning to cherish and to give special loving attention. The following are Watson’s (2001) translation of the carative factors into clinical caritas processes:

Practice of loving kindness and equanimity within context of caring consciousness.

Being authentically present, and enabling and sustaining the deep belief system and subjective life world of self and the one-being-cared-for.

Cultivation of one’s own spiritual practices and transpersonal self, going beyond ego self, opening to others with sensitivity and compassion.

Developing and sustaining a helping-trusting, authentic caring relationship.

Being present to, and supportive of, the expression of positive and negative feelings as a connection with deeper spirit of self and the one-being-cared-for.
Creative use of self and all ways of knowing as part of the caring process; to engage in artistry of caring-healing practices.

Engaging in genuine teaching-learning experience that attends to unity of being and meaning, attempting to stay within others’ frames of reference.

Creating healing environment at all levels (physical as well as non-physical), subtle environment of energy and consciousness, whereby wholeness, beauty, comfort, dignity, and peace are potentiated.

Assisting with basic needs, with an intentional caring consciousness, administering “human care essentials,” which potentiate alignment of mindbodyspirit, wholeness, and unity of being in all aspects of care; tending to both the embodied spirit and evolving spiritual emergence.

Opening and attending to spiritual-mysterious and existential dimensions of one’s own life-death; soul care for self and the one-being-cared-for. (Watson, 2001, p. 347)

Transpersonal Caring Relationship

For Watson (1999), the transpersonal caring relationship characterizes a special kind of human care relationship that depends on:

The nurse’s moral commitment in protecting and enhancing human dignity as well as the deeper/higher self.

The nurse’s caring consciousness communicated to preserve and honor the embodied spirit, therefore, not reducing the person to the moral status of an object.

The nurse’s caring consciousness and connection having the potential to heal since experience, perception, and intentional connection are taking place.

This relationship describes how the nurse goes beyond an objective assessment, showing concerns toward the person’s subjective and deeper meaning regarding their own health care situation. The nurse’s caring consciousness becomes essential for the connection and understanding of the other person’s perspective. This approach highlights the uniqueness of both the person and the nurse, and also the mutuality between the two individuals, which is fundamental to the relationship. As such, the one caring and the one cared-for, both connect in mutual search for meaning and wholeness, and perhaps for the spiritual transcendence of suffering (Watson, 2001). The term “transpersonal” means to go beyond one’s own ego and the here and now, as it allows one to reach deeper spiritual connections in promoting the patient’s comfort and healing. Finally, the goal of a transpersonal caring relationship corresponds to protecting, enhancing, and preserving the person’s dignity, humanity, wholeness, and inner harmony.

Caring Occasion/Caring Moment
According to Watson (1988b, 1999), a caring occasion is the moment (focal point in space and time) when the nurse and another person come together in such a way that an occasion for human caring is created. Both persons, with their unique phenomenal fields, have the possibility to come together in a human-to-human transaction. For Watson (1988b, 1999), a phenomenal field corresponds to the person’s frame of reference or the totality of human experience consisting of feelings, bodily sensations, thoughts, spiritual beliefs, goals, expectations, environmental considerations, and meanings of one’s perceptions—all of which are based upon one’s past life history, one’s present moment, and one’s imagined future.

Not simply a goal for the cared-for, Watson (1999) insists that the nurse, i.e., the caregiver, also needs to be aware of her own consciousness and authentic presence of being in a caring moment with her patient. Moreover, both the one cared-for and the one caring can be influenced by the caring moment through the choices and actions decided within the relationship, thereby, influencing and becoming part of their own life history. The caring occasion becomes “transpersonal” when “it allows for the presence of the spirit of both—then the event of the moment expands the limits of openness and has the ability to expand human capabilities” (Watson, 1999, pp. 116-117).

Clinical Application

The intent of this section is to create a better understanding of Watson’s theory through a clinical story. For this reason, whenever a single or several clinical caritas process(es) (CCP) are encountered, their appropriate numbers are identified within parentheses. The reader shall also notice that this story deviates from the traditional format as it includes reflection and analysis, the purpose of which is to provide an expeditious grasp related to these abstract concepts. Additionally, the reader can also refer to Table 3 for an example of a caring process using Watson’s caring theory (adapted from Cara, 1999; Cara & Gagnon, 2000).

It is December 5th, I am assigned to take care of Mr. Smith, a 55-year-old Caucasian man who will undergo his 5th amputation. Gangrene has ravaged both feet and legs. He is scheduled for an above knee amputation of his right leg, because the last amputation did not heal properly. I know him quite well, since I took care of him during his past hospitalizations (CCP#4). I’ve always liked this patient (CCP#1), it seems that we connected right away after our first meeting (CCP#4). He shared with me his life story [referred to as phenomenal field by Watson], which allowed me to know him as a person not just “a case” going for surgery on our unit.

I welcome him as he is admitted onto the unit. As we glance to each other, he returns a faint smile. [At this moment, a caring occasion takes place.] I ask him how he is doing and tell him that since our last meeting I thought of some creative ways of how he could remember to take his medicine (CCP#6, CCP#7). [According to Watson, the nurse’s creativity contributes to making nursing an art.] He responds that he will be happy to discuss it and also asks how I have been doing. Mr. Smith knows me as a person, he does not consider me as just another nurse, I am “his nurse.” He knows that I care for him and that I am committed to helping him through his ordeal.
(CCP#4). [This is an example of what Watson means by our relationship becoming part of both our life history.]

From his faint smile I can sense that he is depressed. Probably since part of his leg has to be amputated some more. However, I cannot make this assumption and will have to discuss his perceptions and feelings pertaining to his lived experience (CCP#3, CCP#5, CCP#10). While I help him settle in his room, I arrange his environment so that he can feel at ease (CCP#8). Right away, I use the time we have together to ask about himself, his feelings, and his priorities for his care plan and hospitalization (CCP#5, CCP#10). He explains that he wants to be home for Christmas because his son and grandson are coming to visit. Consequently, we will have to plan everything according to his priority. [Although caring takes “too much time” according to some people, I have found, through experience, that focusing on the patients’ priorities and meaning will often help them participate more actively in their healing process. Therefore, even though more time was taken initially, I noticed that, eventually, more time is saved in caring for patients. As Watson (2000) emphasizes, the outcomes that may arise, develop from the process and are characterized and guided by the inner journey of the one being cared-for, not the one caring (or attempting to cure).]

While I help him settle in his bed, he asks for the bedpan (CCP#9). As I install the bedpan delicately underneath him, he says to me, “Look at me, I can’t even manage by myself anymore! I feel like a piece of meat in this bed! Will this surgery work this time or is it a waste of time and money?” I am troubled by his comment and ask him to clarify (CCP#5). He says that people used to respect him but losing his legs also made him lose this respect. I am speechless! [My patient makes me realize the importance of Watson’s caring values based on respecting and preserving human dignity. Yet, hearing how other people’s reaction affects him, I understand more than ever that Mr. Smith and his environment are interrelated (CCP#8, CCP#10)]. He continues to say, “If only you knew me back then, when I was walking and working. Without my legs, I am no longer the same guy!” I ask how losing his legs made him different (CCP#5, CCP#9, CCP#10). He says that he no longer has social recognition and usefulness. [I find it difficult to consider how people can disrespect a human being for being different! Yet, one has to look beyond the body, and look at the mind and the soul.] Sensing that he wants to be alone, I tell him that I will return in a few minutes and I gently pull the curtains to provide privacy and comfort (CCP#8). Trusting that I will return, he thanks me for my help (CCP#4). As I leave the room, I feel powerless towards my patient, not knowing what to say or what to do. [Watson (2000) reminds us that being caring is being vulnerable. “If we are not able to be vulnerable with ourselves and others, we become robotic, mechanical, detached and de-personal in our lives and work and relationships” (p. 6). I want to help him reach some harmony (mindbodyspirit) in his life again (CCP#9). Promoting hope to patients when their situation is somber can be quite overwhelming (CCP#2). But since I believe that giving hope is essential to his harmony, I will have to be somewhat creative (CCP#6). Caring for him is important to me, it is my motivation that contributes to the way I actualize myself professionally. Caring allows me to work with passion! It becomes clear that my most important goal is establishing a transpersonal caring relationship that will, as Watson states, “protect, enhance, and preserve my patient’s dignity,
Viewing the Person Through Watson’s Caring Lens

Watson (1988b) defines the person as a being-in-the-world who holds three spheres of being—mind, body, and spirit—that are influenced by the concept of self and who is unique and free to make choices. Referring to Mr. Smith (see story above) as a “being-in-the-world” entails that I cannot consider him without his context or environment (family, culture, community, society, etc.). In fact, using such definition accentuates the interconnectedness between the person and the environment. Therefore, in my data collection, I inquire about his family, friends, resources within his community, etc. In essence, I am concerned on how he relates with his environment.

In Watson’s later work, she revisits Nightingale’s concept of environment and discusses how the healing space or environment can expand the person’s “awareness and consciousness” and promote mindbodyspirit wholeness and healing (1999, p. 254). This is why Watson recognizes the importance of making the patient’s room a soothing, healing, and sacred place. It is not uncommon in this day and age to enter in a patient’s room only to find it disorganized and unsanitary. One wonders how patients can heal their mindbodyspirit in such an environment.

Watson (1979, 1988b, 1999) acknowledges also the unity of the person’s mindbodyspirit. Therefore, while collecting the data, I do not consider his body alone but will inquire about his mind and spirit as well. The mind corresponds in our example, to Mr. Smith’s emotions, intelligence, and memories. For Watson, the mind is the point of access to the body and the spirit. The spirit relates to Mr. Smith’s soul, the inner self, the essence of the person, the spiritual self. It is the spirit that allows Mr. Smith to transcend the here and now coexisting with past, present, and future, all at once through, for example, creative imagination and visualization. In other words, your spirit allows you to read this article in the present time, while thinking about patients you had in the past, along with visioning how you can utilize this knowledge in the future. Watson believes that spirituality upholds a foremost importance in our profession. In fact, she ascertains that the care of the soul remains the most powerful aspect of the art of caring in nursing (Watson, 1997a). The following questions are examples of how one could enter in a patient’s phenomenal field:

Tell me about yourself?
Tell me about your life experiences?
Tell me about your bodily sensations?
Tell me about your spiritual and cultural beliefs?
Tell me about your goals and expectations?

Such questions generally assist people to share their life story.

Another important aspect of Watson’s perspective corresponds to the respect for the other person’s choices and decisions. Essentially, respect is easily acquired until the person disagrees
with your recommendations, at which point, respecting the other person’s choices can become more complex. Of course, it does not mean that you cannot share your point of view, especially if the patient asks for your perspective.

Viewing the Person’s Health Through Watson’s Caring Lens

Watson’s definition of health does not correspond to the simple absence of disease. In her earlier work, she defines the person’s health as a subjective experience. Health also corresponds to the person’s harmony, or balance, within the mindbodyspirit, related to the degree of congruence between the self as perceived (for example, Mr. Smith is perceiving his condition as deteriorating) and the self as experienced (for example, Mr. Smith is being informed by the health care professionals that his situation is deteriorating and that another amputation will be required). Watson (1988b) believes as one is able to experience one’s real self, the more harmony there will be within the mindbodyspirit, so that a higher degree of health will be present.

The following are example questions that can help assess the patient’s perspective about health:
Tell me about your health?
What is it like to be in your situation?
Tell me how you perceive yourself in this situation?
What meaning are you giving to this situation?
Tell me about your health priorities?
Tell me about the harmony you wish to reach?
Such questions usually contribute to helping people find meaning to the crisis in their life.

Viewing Nursing Through Watson’s Caring Lens

Watson defines nursing “as a human science of persons and human health—illness experiences that are mediated by professional, personal, scientific, esthetic, and ethical human care transactions” (1988b, p. 54). In addition, she also views nursing as both a science and an art. Unfortunately, artistry, along with creativity, is often seen as incongruent with an institution’s policies and procedures. However, according to Watson, being an artist is part of our role and certainly part of caring for patients and their families. In 1999, she exemplifies the artistic domain of nursing as emerging transpersonal caring-healing modalities. Such transpersonal caring-healing modalities correspond to providing comfort measures, helping the cared-for to alleviate pain, stress, and suffering, as well as to promote well-being and healing.

Congruent with other nursing scholars, Watson (1988b) acknowledges caring as the essence of nursing. She also adds that caring can be viewed as the nurse’s moral ideal of preserving human dignity by assisting a person to find meaning in illness and suffering in order to restore or
promote the person’s harmony. You may be inclined to view such “moral ideal” as being extremely intangible and inaccessible. However, as one usually aspires to be the best nurse possible, one tends to evaluate oneself to such ideal. Consequently, the nurse can experience frustrations if he/she feels incongruent with his/her own moral ideal. Instead, an ideal is a guide for shaping practice.

Watson’s (1999) present definition includes caring as a special way of being-in-relation with one’s self, with others, and the broader environment. Such relationship requires both an intention and a commitment to care for the individual. In other words, the nurse has to be conscious and engaged to care in order to connect and establish a relationship with the cared-for to promote health/healing.

The following self-reflective questions are examples that you may ask yourself in regard to your role as a nurse:
What is the meaning of caring for the persons and their families? For myself?
How do I express my caring consciousness and commitment to the persons and their families? To working colleagues? To other health care professionals? To my superiors? To the institution?
How do I define the person, environment, health/healing, and nursing?
How do I make a difference in people’s life and suffering?
How can I be informed by the clinical caritas processes in my practice?
How can I be inspired by Watson’s caring theory in my practice?

Such questions can help the nurse reflect upon his/her caring practice and contribute to the meaningfulness of professional life.

Conclusion

Through this continuing education paper, we were able to learn the essential elements of Watson’s caring theory and explore an example of a clinical application of her work through a clinical story. Aiming to preserve our human caring heritage, this paper offered some suggestions and ideas in order to help nurses grasp and utilize Watson’s caring theory in their work environment.

“Nursing can expand its existing role, continuing to make contributions to health care within the modern model by developing its foundational caring-healing and health strengths that have always been present on the margin.” (Watson, 1999, p. 45)

Author Note

Chantal Cara, Ph.D., RN is an associate professor at the Université de Montréal, Faculty of Nursing. She completed her doctoral studies in nursing at the University of Colorado under the supervision of Dr. Jean Watson. Her main areas of interest are caring philosophy, managerial and
staff nurses caring practices, and qualitative research methodology. She is also involved in the implementation of caring approaches in nursing practice. She is currently a board member of the International Association of Human Caring.

The author would like to thank Dr. Jean Watson for her review and critique of this paper.

Table 2
Assumptions

Watson, 1999, pp. 102-103

Caring is based on an ontology and ethic of relationship and connectedness, and of relationship and consciousness.

Caring consciousness, in-relation, becomes primary.

Caring can be most effectively demonstrated and practiced interpersonally and transpersonally.

Caring consists of “caritas” consciousness, values, and motives. It is guided by carative components [carative factors].

A caring relationship and a caring environment attend to “soul care”: the spiritual growth of both the one-caring and the one-being-cared-for.

A caring relationship and a caring environment preserve human dignity, wholeness, and integrity; they offer an authentic presencing and choice.

Caring promotes self-growth, self-knowledge, self-control, and self-healing processes and possibilities.

Caring accepts and holds safe space (sacred space) for people to seek their own wholeness of being and becoming, not only now but in the future, evolving toward wholeness, greater complexity and connectedness with the deep self, the soul and the higher self.

Each caring act seeks to hold an intentional consciousness of caring. This energetic, focused consciousness of caring and authentic presencing has the potential to change the “field of caring,” thereby potentiating healing and wholeness.

Caring, as ontology and consciousness, calls for ontological authenticity and advanced ontological competencies and skills. These, in turn, can be translated into professional ontologically based caring-healing modalities.

The practice of transpersonal caring-healing requires an expanding epistemology and transformative science and art model for further advancement. This practice integrates all ways of knowing. The art and science of a postmodern model of transpersonal caring-healing is complementary to the science of medical curing, modern nursing, and medical practices.

Did Mr. Smith’s amputation heal properly?
Did Mr. Smith perceive himself as being in harmony?
Has Mr. Smith found meaning to his life?
Post-Test for Continuing Education Credits

A Pragmatic View of Jean Watson’s Caring Theory
By Chantal Cara, Ph.D., RN

Please circle the correct answer for each question below.

1. What is the meaning of the Watson’s concept of caring?
   A. The essence of medicine.
   B. The nurse’s moral standards.
   C. Being nice to the patients and families.
   D. A human intersubjective process between the nurse and the cared-for.

2. What does Jean Watson mean by “caring occasion?”
   A. The time needed for the nurse to set up a helping relationship with her patient.
   B. A focal point in time and space where a caring transaction between the nurse and the person can be created.
   C. The time that the nurse has available to be caring with the person.
   D. The essence of nursing.

3. What is the meaning of the term “phenomenal field” for Watson?
   A. The person’s frame of reference corresponding to the totality of his/her human experience.
   B. An energetic field.
   C. The results of a phenomenological research useful to the nurses working within a specific clinical arena.
   D. The person’s environment.

4. Which of the following statements is consistent with Watson’s caring theory?
   A. A caring relationship and environment attend only to “soul care.”
   B. Being caring does not imply that you have to be vulnerable in front of patients and families.
   C. The clinical caritas processes serve as guide for the nurse in her caring practice.
D. The person’s harmony within the mindbodyspirit is related to the degree of congruence among the health care professionals.

5. Choose the best statement corresponding to Jean Watson:
A. Jean Watson is among the few nursing theorists to consider the caregiver along with the cared-for.
B. Jean Watson is a nursing theorist only known within the United States.
C. Jean Watson gives emphasis to the physical aspect of the cared-for.

6. The transpersonal caring relationship characterizes a special kind of human care relationship, which depends on:
A. The nurse’s moral commitment in protecting and enhancing her own career.
B. The nurse’s caring consciousness and connection having the potential to heal since experience, perception and intentional connection are taking place.
C. The nurse’s caring consciousness communicated to preserve and honor the embodied spirit, therefore, reducing the person to the moral status of an object.

7. Which of the following statements corresponds to Jean Watson’s work?
A. Caring-healing processes and relationships are considered sacred.
B. The outcome are defined and guided by the inner journey of the one caring.
C. A high regard and reverence for the spiritual-objective center of the person.

8. Which of the following statements highlights the goal of Watson’s transpersonal perspective?
The end is the actualization of the one caring.
The end is the person’s adaptation to the environment.
The end is the cure of the one cared-for.
The end is the preservation of dignity, humanity, and inner harmony.

9. Choose the appropriate statement pertaining to Watson’s caring moment:
A. Only the one caring is influenced by the caring moment through the choices and actions decided within the relationship.
B. Both, the one cared-for and the one caring are influenced by the caring moment, through the choices and actions decided within the relationship.

C. Only the one cared-for is influenced by the caring moment through the choices and actions decided within the relationship.

10. According to Jean Watson, when does the caring occasion become transpersonal?
A. When it allows for the presence of the spirit of both persons.
B. When it expands the limits of openness.
C. When it has the ability to expand human capabilities.
D. All the statements are correct.

11. Which of the following statements corresponds to Watson’s definition of human being?
A. “A bio-psycho-social being-in-the-world.”
B. “A cultural being who survived to both time and space.”
C. “A being-in-the-world who possesses three spheres of being—mind, body, and spirit, and who is free to make choices.”
D. “An irreducible, indivisible and pandimensional energy field.”

12. Identify the appropriate statement consistent with Jean Watson’s definition of health:
A. “The harmony within the mindbodyspirit.”
B. “The absence of disease.”
C. “The independence to satisfy one’s basic needs.”
D. “The quality of life.”

13. Which of the following statements is related to Watson’s definition of nursing?
A. “To enhance the adaptation of the person in order to respond to environmental stimuli.”
B. “A human science of persons and human health—illness experiences that are mediated by human care transactions.”
C. “To preserve the patient’s behavior by means of imposing regulatory mechanisms or by providing resources.”
D. “A significant, therapeutic, interpersonal process where the nurse-patient relationship has four overlapping phases.”
14. Jean Watson’s transpersonal caring—healing modalities correspond to the following statement:
A. Comfort measures associated with therapeutic touch.
B. Nursing standards developed in interaction with the nursing diagnosis.
C. Nursing policies and procedures related to basic techniques.
D. Comfort measures to alleviate stress and suffering and promote healing.

15. Within the following statements, identify the one that does correspond to Watson’s concept of spirit?
A. The person’s intelligence.
B. The person’s phenomenal field.
C. The inner self.
D. The emotional self.

The following questions are based on Mrs. Davis’ situation.
Mrs. Davis is a 65-year-old patient admitted on your unit for bacterial peritonitis. You mention to her that she needs an intravenous catheter in order to start the antibiotic therapy. She then says that she doesn’t need any antibiotics to heal but requires only prayers. Inspired by Jean Watson’s theory, answer the following questions.

16. Why would you use the 10th clinical caritas process, “opening and attending to spiritual-mysterious, and existential dimensions of one’s own life-death; soul care for self and the one-being-cared-for” with Mrs. Davis?
A. Because the meaning Mrs. Davis will give to her health care situation is influenced by her lived experience and spirituality.
B. Because Mrs. Davis is a religious person.
C. Because the physician ordered antibiotic therapy for Mrs. Davis.
D. Because Mrs. Davis is entitled to a caring relationship.

17. Inspired by Watson’s work, why would you use the 7th clinical caritas process “Engaging in genuine teaching-learning experience that attends to unity of being and meaning, attempting to stay within the other’s frame of reference?”
A. It will assist in providing the information related to her nursing diagnosis.
B. It will help in considering Mrs. Davis’ meaning pertaining to her health situation.
C. It will assist in demanding that Mrs. Davis complies with her physician’s orders.

18. Inspired by Jean Watson’s theory, what question would help Mrs. Davis share her life story?
A. Tell me about your spiritual and cultural beliefs?
B. Tell me about your health priorities?
C. Do you suffer from any allergies?
D. Just consulting Mrs. Davis’ chart would be sufficient.

19. Based on Watson’s caring theory, what would be one of your nursing care interventions with Mrs. Davis?
A. Convince Mrs. Davis to receive her antibiotics or to be discharged at her own risk.
B. Demand that Mrs. Davis’ behaviors follow hospital’s policies.
C. Establish a transpersonal caring relationship so she can express her positive and negative feelings towards the situation.
D. Have the physician talk to her.

20. Identify the clinical caritas process you would find useful with Mrs. Davis while trying to make her feel comfortable in her room?
A. Creative use of self and all ways of knowing as part of the caring process; to engage in artistry of caring-healing practices.
B. Being authentically present, and enabling and sustaining the deep belief system and subjective life world of self and the one-being-cared-for.
C. Developing and sustaining a helping-trusting, authentic caring relationship.
D. Creating healing environment at all levels, (physical as well as non-physical, subtle environment of energy and consciousness) whereby wholeness, beauty, comfort, dignity, and peace are potentiated.

Please note: No more than 4 answers can be incorrect in order to receive continuing education credit.

Evaluation Form

Title: A Pragmatic View of Jean Watson’s Caring Theory

Presenter: Chantal Cara, Ph.D., RN

Please fill in your response in the box provided

1 = Excellent  2 = Good  3 = Fair  4 = Poor

A. How well did the presenter meet the identified objectives? Rating

Describe the general aspects of Watson’s caring theory

Describe how Watson’s caring theory can be applied to clinical practice

Describe the person through Watson’s caring lens

Describe the person’s health through Watson’s caring lens

Describe Nursing Through Watson’s Caring Lens

B. How would you rate your overall satisfaction with the program?

C. Rate the relevance of the content presented to stated objectives.

D. How well prepared did the presenter seem to be?
E. Rate the presenter’s ability to communicate information effectively.  

F. How long did it take you to complete this CEU activity?
